**The only liquid nonrepellent, non-IGR labeled for indoor general pest control including commercial food handling areas.**

The secret behind the success of Phantom termiticide-insecticide lies in its cutting edge chemistry. It's active ingredient, chlorfenapyr, is totally undetectable. Pests can't smell it, taste it, or, most importantly, avoid it. As a result, they unknowingly contact and ingest it as they go about their routine activities.

[Safety Data Sheet \(SDS\) /  
Product Label](#)
[General Info](#)**General Information**

Once ingested, Phantom attacks pests from inside their own bodies by preventing their cells from generating energy. This leads to paralysis, and, ultimately, death.

However, this process is not instantaneous, which means Phantom will not cause an accumulation of dead pests in a particular spot. Instead, they continue to behave normally and go about their regular routines for a short time before dying. There is nothing about their behavior to tip off others to Phantom's presence.

Other products are far less stealthy, and, as a result, far less successful.

\*\* Phantom is not a knockdown agent.

Phantom is a liquid, but it's not at all like the broad-spray liquids you've grown accustomed to. It is selectively applied in small, precisely targeted "shots." That means less chemical applied to your customers' homes, and more homes treated per bottle. In addition, Phantom is the only nonrepellent, non-IGR, liquid labeled for use with both baits and IGRs, which means it won't get in the way of the GPC products you're already using.

Since Phantom can be reapplied every 28 days, and to outside entry points (doors, windows, eaves, etc.), Phantom is an extremely flexible, service-schedule-friendly component of any GPC program.

Because Phantom is the only nonrepellent liquid labeled for food-handling areas it opens up a wealth of new business opportunities for PMPs in any establishment where food is handled, served or stored. And since Phantom can be used with baits, it can be used to make existing accounts far more effective too.
