Sterifab®: How to Get Rid of Bed Bugs - Fast!

Bed Bugs are parasitic insects that feed exclusively on blood. And while they can't fly, they can nevertheless move quickly over floors, walls and ceilings. As a rule, they prefer warm places- houses, offices, hotel room, day care centers, hospitals, virtually anywhere humans dwell- but they are especially drawn to beds, bedding and other sleep areas. Although they are usually active at night, bed bugs are not entirely nocturnal.

There's no easy bed bug treatment. Bed bugs are resilient insects and they can go several months without feeding. If you have the slightest suspicion that you have a bed bug infestation, don't hesitate. If you want to know how to get rid of bed bugs, search no further. Track down the source immediately and use Sterifab before they become well-established and proliferate.

Bed Bugs: What to Look For

Bed bugs are small, oval and brownish in color and adult bed bugs have flat bodies about the size of an apple seed. After feeding, their bodies swell and turn a reddish color. They usually enter a home undetected, carried in with luggage, clothing, used beds and couches and other innocuous items.

Unfortunately, their flat bodies make it easy for them to fit into very small tiny spaces. Bed bugs can quickly and easily spread from bedrooms to other rooms or apartments, preferring to live in crevices or other protected locations.

Unlike ants or bees, bed bugs don't make nests, but they do have a tendency to live in groups.

How to Get Rid of Bed Bugs with Sterifab

Here's how to get rid of bed bugs so they never return in 5 easy steps:

Remove any clutter, including stacks of paper or piles of laundry.
Treat all affected areas with Sterifab bed bug spray.
Clean all the affected rooms thoroughly.
Vacuum beds, carpets, chairs, drapes, blinds and more.
Wash all sheets and bedding in HOT water.

Their primary hiding places are mattresses, box springs, bed frames and headboards, where they have easy access to their main source of blood-people. That's also why it's so hard to know what gets rid of bed bugs.

Read about bed bug treatment and how to rid yourself of bed bugs.

Use Sterifab Anywhere

Sterifab is a powerful and very potent agent for eliminating insects, fungus and odors. One of its many advantages is that it's engineered to do more than eradicate bed bugs and other insects. It also:

- Destroys micro-organisms
- Kills fungus
- Kills viruses
- Kills mold and mildew
- Kills germs and disinfects

This is why Sterifab has been the bed bug treatment of choice for a wide variety of institutions and facilities, including:

- Schools and Daycare Centers
- Hospitals and Hospital Emergency Rooms
- Office Buildings
- Veterinary Offices and Animal Kennels
- Hotels and Motels
- Churches and Houses of Worship
- Retirement Homes
- College Dormitories
- Police Departments and Correctional Facilities

Use Sterifab to Prevent Future Bed

Bug Infestations

Remember, bed bugs can hide virtually anywhere. Their small size makes it easy for them to squeeze into really small hiding places. Bed bugs can be found in the seams of chairs and couches, between cushions and in the folds of curtains; in household appliances, kitchen utensils, bookcases, even pictures and wall hangings. They've even been found in electrical sockets and laptop computers.

Fortunately, Sterifab can be used effectively on everything except people, animals and cooking utensils.

And it's a multipurpose product! In addition to getting rid of bed bugs, ticks, fleas and other insects, Sterifab:

- Deodorizes and controls odor-causing organisms.

- Sanitizes and deodorizes restrooms.

- Is one of the only non-residual products labeled for use on mattresses and upholstered furniture.

- Has no added perfume or unpleasant odor.

- Dries in 15-20 minutes, is biodegradable and leaves no residue.

Did you know?

Sterifab does more than get rid of bed bugs! You can also use it to:
