

ER-22 by EcoRaider® Insect Killer Concentrate

ER-22 by EcoRaider is a concentrate emulsion based on the original botanical formula of the RTU broad-spectrum bio-insecticide. It provides pest management practitioners with a better, stronger and more efficient tool for green, natural bed bug control, perimeter ants control and other pest control purpose.

ER-22 refers to the product's 2x strength of the existing RTU formula which is industry

tested against bed bugs including resistant populations. ER-22 by EcoRaider delivers the same performance with better cost to end users and provides effective control for all environments, especially sensitive ones.

In addition to bed bugs, ER-22 also includes perimeter ant control on the label. A field study by Purdue University proved that it delivers a one-minute kill and leaves behind a four-week residual against odorous house ants. ER-22 is diluted up to a 1:1 ratio for bed bugs treatment and 5:1 for perimeter ant control.

ER-22 by EcoRaider carries no signal words or cautions, has no label restrictions or precautions on usage, and is a green product, making it an ideal fit for sensitive accounts and environments where low-impact methods are advised.

These include senior-living facilities, managed-care and assisted-living housing, public housing, multi-family, hospitals and hotels. It can be incorporated with other treatment methods such as heat or steam.

Product Key Features:

- **Excellent tool for green bed bug control.**
- **30-day green perimeter ant control.**
- **Ideal IPM & resistance management tool.**
- **Can be used in all types of environments.**
- **Minimum risk, child and pet friendly.**
- **No staining, no vacating and no signal words.**
