

## Study 67b

### Field Summary

A field evaluation of EcoRaider<sup>®</sup>, EcoRaider plus Temprid<sup>®</sup> SC, and Temprid SC sprays was conducted to control bed bugs in apartments in NJ. Units had bed bug precounts taken to allow similar the grouping of similar infestations levels per treatment. All units were sprayed. Follow up inspections were conducted biweekly for 12 weeks with visible bed bugs sprayed at each inspection. No untreated controls were used. After 12 weeks, no difference in % reduction in bed bug populations were noted among the 3 treatments where approximately 92% control was recorded. Five of 24 units were free of bed bugs at 12 weeks. EcoRaider was noted to have an odor which lasted up to 2 weeks.
