Product Application

STERIFAB - Required Usage

One carton of Sterifab gallons will treat approximately 20-25 sets (box spring and double mattress)

One carton of a 5 gallon Sterifab will treat approximately 30-35 sets (box spring and double mattress)

Usage on upholstered furniture is dependent on size, however, a typical couch or sofa will require 10-12 ounces per application. (A gallon will cover approximately 8-10 pieces of upholstered furniture while the 5-gallon container will treat approximately 40-50 pieces.)

Please note:

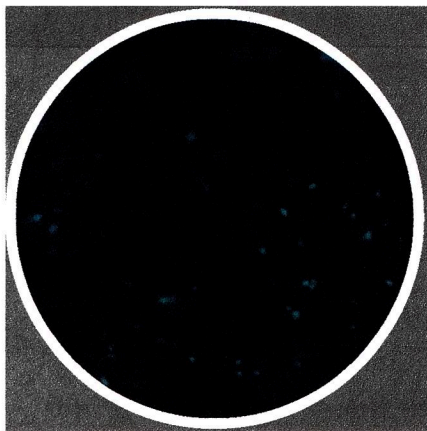

- * Sterifab must be shaken well before and during application to ensure that the identification crystals are dispersed evenly.
- * The above estimates are just that, estimates. Yield may be altered significantly due to the type of sprayer and spray pattern.
- * Larger mattresses, upholstered furniture, etc., may require more Sterifab than the estimates stated above, while futons, wheelchairs, and other items may require less.

STERIFAB - Continuous Action Sprayer (CAS)

Why Should I Use This Sprayer?

The CAS is fully labeled for use with Sterifab, conforms to all legal requirements, and is manufactured specifically to spray Sterifab. The CAS is free of any other chemicals or contaminants. The CAS is fitted with a nozzle that disperses Sterifab at a rate that supports our coverage estimates (1500 square feet per gallon).

STERIFAB - Unique Crystal Tracer

Every container of Sterifab is bottled with a sufficient amount of tracer that can be observed under a highly magnified UV light.* Using a suitable detection unit, areas that have been treated can be easily identified.

*Magnification & UV specifications can be provided upon request.
