

Study 67a

Laboratory Summary

Field collected bed bug nymphs (large) were sprayed with either EcoRaider® or Temprid® SC. Mortality data were taken at 1, 3, 5, 7, and 10 days after treatment. For EcoRaider, less than 75% mortality occurred at 3 days and 100% at 10 days. For Temprid SC, 100% mortality occurred at 3 days. There was concern expressed by the authors over the performance of EcoRaider when bed bugs were exposed to dry residues compared to direct spray application.
